What to fold back into TTDS

Everything below was built in the Technology Grants project and is worth carrying forward. Nothing flows automatically — a session in the design system project has to do it. Work down the list; each row says what to create and where it belongs.

WHAT	GOES TO	WHY, AND WHAT TO WATCH
Collection planning document Nonprofit Tech Stack Collection.dc.html · 16pp	templates/	The pattern for planning any collection: thesis, scoring rubric, roster, sequence, anatomy, cost, value floor, email series, campaign journey, analytics. Strip our roster and prices; keep the page shapes.
Free lead-in guide Maximizing Your Technology Grants · 22pp	templates/	New shape TTDS has no template for: a free, tabbed, gated document. Contents page that jumps to sections, timeline strip, gate page for three readers, two-page tool spreads, closing doors.
Funnel landing page Trail Kits Landing Page.dc.html	ui_kits/website/	First web surface built for paid ad traffic. Composes Button, Pill, StatBlock, NeedRow and Card, with breakpoints at 900 and 560. The responsive rules are the reusable part.
Working with the AppExchange 1 sheet	templates/	Shared insert, plain `.trail-kit` scope. Add to the shared-inserts table in the readme so kits bind it rather than restating install advice.
Who Can See What 3 sheets	templates/	Deliberately scoped around the existing Security model insert: org-wide defaults, field level security, layouts, Lightning pages, custom permissions, plus a troubleshooting ladder. **Cross-reference both ways** when you add it, or they will drift.
KitMeta bar · fill-in register · price tier card	components/	Each now appears in three or more documents. KitMeta (time, level, prerequisites, comes-with), the dotted fill-in register block, and the landing page tier card.

⊘ WHAT MUST NOT GO INTO THE DESIGN SYSTEM

Our live license counts, prices, and any figure with a date on it. Those belong in the Trail OS record and the production companion doc, and the kits should read them from there. A design system carrying a number goes stale the first time we add a staff member.

Rules we learned the hard way this month

Each of these was discovered by writing something wrong first. Add them to the voice section of the readme so the next kit does not rediscover them.

RULE	WHAT IT SAYS, AND WHY IT EXISTS
Never write "honest"	Say the true thing instead. Announcing your own honesty protests too much, and the brand's credibility comes from specifics — a named failure, a dated figure — not from the adjective.
Date every figure	Any price, seat count or program term carries a verified month, and the page tells the reader to check it. Vendor terms move faster than we reprint.
One license per person	State it wherever accounts are created: sharing a login breaks the terms of service, erases the audit trail, and can put a grant at risk. Standard User first, permissions added deliberately.
Eligibility is not universal	Anything about claiming a grant names who may be excluded — faith-based, fiscally sponsored, schools, healthcare, government — before the reader spends an afternoon on forms.
Consent and unsubscribe	Consent recorded on the record with source and date; a purchase alone is not consent. One-click unsubscribe writing to the contact, honored immediately, tested before each launch.
The platform's own name	The prohibited-terms rule stands for our language, but we may name an external product as a link destination. Our copy still says "learning path".
Read the inserts first	Before writing any sheet, list `templates/` and read the nearest existing insert. We rebuilt a security sheet that already existed, and it cost two rounds to unpick.

⚠ TWO PRODUCTION NOTES WORTH ENCODING

Print pages have no slack: adding a table row means removing a line elsewhere, and the tell is a footer sitting inside the bottom margin. And QR codes are only generated from confirmed URLs — a dead QR in print cannot be fixed.

THEN WE CARRY ON

Once TTDS carries the templates and rules, kit drafting resumes against them rather than against this project: Foundations first, then the reporting kit, then Jotform. The bundles on page 11 of the plan decide the order.
